< ロ > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □

Question 1 : What are natural decompositions for either side of this equivalence?

Let X be a Fano DM stack and $W : X^{mir} \to \mathbb{C}$ its mirror potential. $\frac{\text{HMS Conjecture}}{2}$: There is an equivalence

$$D(X) \cong FS(W).$$

Question 1 : What are natural decompositions for either side of this equivalence?

Question 2 : Does HMS respect these decompositions?

Question 1 : What are natural decompositions for either side of this equivalence?

(ロ)、(型)、(E)、(E)、 E) の(の)

Question 1 : What are natural decompositions for either side of this equivalence?

B-model answer : If X admits a minimal model or VGIT sequence

$$X \xrightarrow{f_1} X_1 \xrightarrow{f_2} \cdots \xrightarrow{f_r} X_r$$

then

$$D(X) = \left\langle \mathcal{T}_{f_1}^B, \ldots, \mathcal{T}_{f_r}^B, D(X_r) \right\rangle.$$

If $X_r = \emptyset$, then this fully decomposes D(X) in terms of wall contribution categories.

Question 1 : What are natural decompositions for either side of this equivalence?

(ロ)、(型)、(E)、(E)、 E) の(の)

A-model answer : Take the following steps

Question 1 : What are natural decompositions for either side of this equivalence?

A-model answer : Take the following steps

Step 1 : Replace $W: X^{mir} \to \mathbb{C}$ with **w** where

$$\begin{array}{c} X^{mir} \longrightarrow \mathcal{U} \\ W \downarrow \qquad \qquad \downarrow^{\pi} \\ \mathbb{C} \xrightarrow{\mathbf{w}} \mathcal{M} \end{array}$$

and $\pi: \mathcal{U} \to \mathcal{M}$ is a moduli stack of hypersurfaces of X^{mir} .

Question 1 : What are natural decompositions for either side of this equivalence?

A-model answer : Take the following steps

Step 2 : Compactify the range \mathbb{C} of the superpotential W where

$$\begin{array}{ccc} \bar{X}^{mir} \longrightarrow \bar{\mathcal{U}} \\ w & & \downarrow^{\pi} \\ \mathbb{P}^1 \xrightarrow{\mathbf{w}} \bar{\mathcal{M}} \end{array}$$

and $\pi : \overline{\mathcal{U}} \to \overline{\mathcal{M}}$ is a compactified moduli stack of stable hypersurface degenerations of \overline{X}^{mir} .

Question 1 : What are natural decompositions for either side of this equivalence?

A-model answer : Take the following steps

Step 3 : Consider a 1-parameter degeneration \mathbf{w}_t of $\mathbf{w} = \mathbf{w}_1$

$$\begin{array}{c} \tilde{X}_{\mathbf{w}_{-}}^{mir} \longrightarrow \bar{\mathcal{U}} \\ W \downarrow \qquad \qquad \downarrow^{\pi} \\ \mathbb{P}^{1} \times D^{*} \stackrel{\mathbf{w}_{t}}{\rightarrow} \bar{\mathcal{M}} \end{array}$$

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

where D is the unit disc and $D^* = D \setminus \{0\}$.

Question 1 : What are natural decompositions for either side of this equivalence?

A-model answer : Take the following steps

Step 4 : Consider the degenerate potential \mathbf{w}_0 of \mathbf{w}_t which is a map

$$\mathbf{w}_0 = \cup \mathbf{w}_0^i : \cup_1^r \mathbb{P}^1 o \bar{\mathcal{M}}.$$

Question 1 : What are natural decompositions for either side of this equivalence?

A-model answer : Take the following steps

Step 5 : Taking W_i to be the pullback of \mathcal{U} along \mathbf{w}_0^i and $\mathcal{T}_{\mathbf{w}^i}^A = FS(W_i)$, there is a semi-orthogonal decomposition

$$FS(W) = \left\langle \mathcal{T}_{w^1}^A, \ldots, \mathcal{T}_{w'}^A \right\rangle.$$

Question 2 : Does HMS respect these decompositions?

Question 2 : Does HMS respect these decompositions? Toric Setting : Diemer, Katzarkov, K. (DKK) give an explicit prescription for taking a VGIT sequence

$$X \xrightarrow{f_1} X_1 \xrightarrow{f_2} \cdots \xrightarrow{f_r} \emptyset$$

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

to a degeneration \mathbf{w}_t of mirror potentials.

Question 2 : Does HMS respect these decompositions? Toric Setting The resulting decompositions

$$D(X) = \left\langle \mathcal{T}_{f_1}^B, \dots, \mathcal{T}_{f_r}^B \right\rangle,$$

$$FS(W) = \left\langle \mathcal{T}_{\mathbf{w}^1}^A, \dots, \mathcal{T}_{\mathbf{w}^r}^A \right\rangle$$

have the same number of components. Theorem (DKK) : For mirror decompositions,

$$\mathsf{rk}(\mathcal{K}_0(\mathcal{T}^B_{f_i})) = \mathsf{rk}(\mathcal{K}_0(\mathcal{T}^A_{\mathbf{w}^i})).$$

Question 2 : Does HMS respect these decompositions? Toric Setting The resulting decompositions

$$D(X) = \left\langle \mathcal{T}_{f_1}^B, \dots, \mathcal{T}_{f_r}^B \right\rangle,$$

$$FS(W) = \left\langle \mathcal{T}_{\mathbf{w}^1}^A, \dots, \mathcal{T}_{\mathbf{w}^r}^A \right\rangle$$

have the same number of components. Theorem (DKK) : For mirror decompositions,

$$\mathsf{rk}(\mathcal{K}_0(\mathcal{T}^B_{f_i})) = \mathsf{rk}(\mathcal{K}_0(\mathcal{T}^A_{\mathbf{w}^i})).$$

Question 2 : Does HMS respect these decompositions? Toric Setting The resulting decompositions

$$D(X) = \left\langle \mathcal{T}_{f_1}^B, \dots, \mathcal{T}_{f_r}^B \right\rangle,$$

$$FS(W) = \left\langle \mathcal{T}_{\mathbf{w}^1}^A, \dots, \mathcal{T}_{\mathbf{w}^r}^A \right\rangle$$

have the same number of components. Theorem (DKK) : For mirror decompositions,

$$\mathsf{rk}(K_0(\mathcal{T}^B_{f_i})) = \mathsf{rk}(K_0(\mathcal{T}^A_{\mathbf{w}^i})).$$

Conjecture : There exists an equivalence of categories

$$\mathcal{T}_{f_i}^B \cong \mathcal{T}_{\mathbf{w}^i}^A.$$

and these isomorphisms are compatible with composition.

Want to compute the dg-algebra

$$End^*_{Coh^{eq}(X)}(\oplus_{i=0}^{-a_{d+1}-1}\mathcal{O}_{B_-}(i))$$

in the dg category $Coh^{eq}(X)$.

► Given an equivariant sheaf *F*,

$$\operatorname{Hom}_{\operatorname{Coh}^{eq}(X)}^{*}(\mathcal{F}(i),\mathcal{F}(j))\cong\operatorname{End}_{\operatorname{Coh}(X)}^{*}(\mathcal{F})_{(j-i)}$$

and these isomorphisms are compatible with composition.

 An elementary computation shows there are quasi-isomorphisms

$$\operatorname{End}_{\operatorname{Coh}(X)}^{*}(\mathcal{O}_{B_{-}}) \cong \operatorname{Ext}_{\operatorname{Coh}(X)}^{*}(\mathcal{O}_{B_{-}}, \mathcal{O}_{B_{-}}),$$
$$\cong \Omega_{X/B_{-}}^{*},$$
$$\cong \operatorname{Sym}^{*}(V_{0} \oplus V_{1}).$$

$$\operatorname{End}_{Coh(X)}^{*}(\mathcal{O}_{B_{-}}) \cong \operatorname{Sym}^{*}(V_{0} \oplus V_{1}).$$

Here, we take

$$egin{aligned} V_0 &= \mathbb{C}\{z_i: a_i > 0\}, \ V_1 &= \mathbb{C}\{dz_i: a_i < 0\}[1]. \end{aligned}$$

So that $R_a := \text{Sym}^*(V_0 \oplus V_1)$ is a weighted, super-symmetric algebra with wt $(z_i) = a_i$ and wt $(dz_i) = -a_i$.

$$\operatorname{End}_{Coh(X)}^{*}(\mathcal{O}_{B_{-}}) \cong \operatorname{Sym}^{*}(V_{0} \oplus V_{1}).$$

Here, we take

$$V_0 = \mathbb{C}\{z_i : a_i > 0\},\ V_1 = \mathbb{C}\{dz_i : a_i < 0\}[1].$$

So that $R_a := \text{Sym}^*(V_0 \oplus V_1)$ is a weighted, super-symmetric algebra with wt $(z_i) = a_i$ and wt $(dz_i) = -a_i$.

► Due to formality, and working in the category R_a-mod^Z, the Yoneda functor yields an equivalence of categories

$$\mathcal{T}^{\mathcal{B}}_{\mathbf{a}} \cong D\left(\mathsf{End}^*\left(\bigoplus_{k=0}^{-a_{d+1}-1} R_{\mathbf{a}}(k)\right) \operatorname{-mod}\right)$$

Examples

$$R_{\mathbf{a}} = \operatorname{Sym}^{*}(V_{0} \oplus V_{1}) \cong \operatorname{End}_{Coh(X)}^{*}(\mathcal{O}_{B_{-}}).$$

$$\frac{\mathbf{a}}{(1,1,-2)} \frac{R_{\mathbf{a}}}{\mathbb{C}[z_{0}, z_{1}, dz_{2}]} \frac{X_{+}/\mathbb{C}^{*}}{\mathbb{P}^{1}} \qquad \emptyset$$

$$R_{\mathbf{a}}(0) \xrightarrow[z_0]{z_1} R_{\mathbf{a}}(1)$$

The corollary asserts that the W_a vanishing cycles L_0^a, L_4^a are fibered over T_0, T_4 via f, collapsing at its endpoints.

This gives a decomposition

 $Hom_{FS(W_{a})}(L_{0}^{a}, L_{4}^{a}) = CF^{*}(L_{0}^{a}, L_{4}^{a}) = \bigoplus_{y \in T_{0} \cap T_{4}} CF^{*}(L_{0,y}^{b}, L_{4,y}^{b})$

Implying $\text{Hom}_{FS(W_a)}(L_0^a, L_4^a)$ is isomorphic to

$$\mathsf{Hom}_{FS(W_{\mathbf{b}})}(L_{0}^{\mathbf{b}}, L_{0}^{\mathbf{b}}) \oplus \mathsf{Hom}_{FS(W_{\mathbf{b}})}(L_{0}^{\mathbf{b}}, L_{2}^{\mathbf{b}}) \oplus \cdots$$
$$\cdots \oplus \mathsf{Hom}_{FS(W_{\mathbf{b}})}(L_{0}^{\mathbf{b}}, L_{4}^{\mathbf{b}}) \oplus \mathsf{Hom}_{FS(W_{\mathbf{b}})}(L_{0}^{\mathbf{b}}, L_{1}^{\mathbf{b}}).$$

By induction, we have $\text{Hom}_{FS(W_a)}(L_0^a, L_4^a)$ is isomorphic to

 $\mathbb{C} \cdot \{1\} \oplus \mathbb{C} \cdot \{d\tilde{z}_2\} \oplus \mathbb{C} \cdot \{d\tilde{z}_3\} \oplus \mathbb{C} \cdot \{\tilde{z}_1\} \subset R_{\mathbf{b}}.$

▲□▶ ▲圖▶ ▲臣▶ ▲臣▶ 三臣 - わへで

Taking $\tilde{z}_j, d\tilde{z}_i \in R_b$ to $z_{j+1}, dz_{i+1} \in R_a$, and multiplying by a power of z_0 or z_1 (depending on the summand), we obtain

 $\mathbb{C} \cdot \{1\} \oplus \mathbb{C} \cdot \{d\tilde{z}_2\} \oplus \mathbb{C} \cdot \{d\tilde{z}_3\} \oplus \mathbb{C} \cdot \{\tilde{z}_1\} \subset R_{\mathbf{b}},$ $\mathbb{C} \cdot \{z_0^2\} \oplus \mathbb{C} \cdot \{z_0 dz_3\} \oplus \mathbb{C} \cdot \{dz_4\} \oplus \mathbb{C} \cdot \{z_1 z_2\} = R_{\mathbf{a}}(4)$

This yields the isomorphism of vector spaces

$$\Phi: \operatorname{Hom}_{FS(W_{\mathbf{a}}^{1/n})}(L_{0}^{\mathbf{a}}, L_{4}^{\mathbf{a}}) \xrightarrow{\cong} R_{\mathbf{a}}(4).$$

Induction Step

This decomposition is compatible with the Floer product, which defines the functor Φ on morphisms.

Induction Step

This decomposition is compatible with the Floer product, which defines the functor Φ on morphisms.

Utilizing the observation that only holomorphic triangles exist bounding the thimbles T_i , one obtains a formality result on the *n*-th unfolded category $\mathcal{A}^{1/n}$. This gives that Φ is an equivalence of categories.

Future directions

Recall that the original conjecture was an equivalence of decompositions

$$D(X) = \left\langle \mathcal{T}_{f_1}^B, \dots, \mathcal{T}_{f_r}^B \right\rangle,$$

$$FS(W) = \left\langle \mathcal{T}_{\mathbf{w}^1}^A, \dots, \mathcal{T}_{\mathbf{w}^r}^A \right\rangle.$$

Future directions

Recall that the original conjecture was an equivalence of decompositions

$$D(X) = \left\langle \mathcal{T}_{f_1}^B, \dots, \mathcal{T}_{f_r}^B \right\rangle,$$

$$FS(W) = \left\langle \mathcal{T}_{\mathbf{w}^1}^A, \dots, \mathcal{T}_{\mathbf{w}^r}^A \right\rangle.$$

► To check this holds, we must identify (*T*^B_{fi}, *T*^B_{fi+1}) and (*T*^A_{wi}, *T*^A_{wi+1}) bimodules, which glue the pieces together, and prove their equivalence.

Future directions

Recall that the original conjecture was an equivalence of decompositions

$$D(X) = \left\langle \mathcal{T}_{f_1}^B, \dots, \mathcal{T}_{f_r}^B \right\rangle,$$
$$FS(W) = \left\langle \mathcal{T}_{\mathbf{w}^1}^A, \dots, \mathcal{T}_{\mathbf{w}^r}^A \right\rangle.$$

- ► To check this holds, we must identify (T^A_{fi}, T^A_{fi+1}) and (T^A_{wi}, T^A_{wi+1}) bimodules, which glue the pieces together, and prove their equivalence.
- At a more elementary level, the equivalence between $\mathcal{T}_{\mathbf{a}}^{B}$ and $\mathcal{T}_{\mathbf{a}}^{A}$ must be shown in the case when some $a_{i} = 0$ (e.g. blowing up subvarieties of positive dimension).
